

1, Explain behaviour of hub device

hub is a layer 1 ~~switch~~ device. Its will do broadcast to all connected devices, due to broadcast collision will be occur.

2, Explain behaviour of switch device

It is layer 2 device. Its contain MAC table. first time only Its do broadcast and then based on MAC table It will act unicast.

The MAC table duration is 5 min.

3, Explain behaviour of router device

It is layer 3 device. Its mainly used to break the broadcast domain. Its contain routing table.

Its used to connect multiple ^{different} networks.

routing table contain network ID, Prefix length, Interface Name.
